Abstract (en)
[origin: WO2022161754A1] The present invention relates to a component consisting of at least two segments which are movably connected to one another via one or more stays, wherein the component consists of a cast body or parts of a cast body which is cast in the casting chamber of a casting mould, and the component is longer than the maximum extent of this casting chamber, when the component is oriented via the one or more movable stays so that it reaches a maximum length L along an axis A, and method for producing same.
