Abstract (en)  
[origin: CA3206610A1] The present invention describes a solution (S) comprising at least one metal salt (M), a reducing agent (R) which makes it possible to reduce the metal salt (M), and a stabilising additive (T) of formula (F1): F1 in which the Ra, Rb and Rc groups denote, independently of one another, an alkane, an alkene or an alkyne, which may be independently linear, branched or cyclic and which comprise from 1 to 20 carbon atoms, and where the Rd and Re groups denote, independently of one another, a hydrogen atom, or an alkane, an alkene or an alkyne, which may each be independently linear, branched or cyclic and which comprise from 1 to 20 carbon atoms.
