Abstract (en)  
[origin: WO2022159997A1] The invention relates to a multilayer sliding bearing element (1) comprising an anti-friction layer (4) that contains, as its main component, a metal composition formed from at least three elements, A, B and C; wherein, for each of the elements A, B and C, a concentration gradient is formed in the axial direction (7) and, where appropriate, in the radial direction (8) of said multilayer sliding bearing element (1).
