Abstract (en)

[origin: WO2022162577A1] The system (10) comprises a main structure (12) in which a firing chamber (14) and a braking and recovery tank (16), adjacent to the firing chamber (14), are positioned. The firing chamber (14) is intended for housing a firearm (18) configured for firing a projectile (P) into the braking and recovery tank (16). Furthermore, the braking tank (16) is configured for containing a liquid capable of braking the projectile (P) coming from the firing chamber (14) and fired by the firearm (18). There is also a covering panel (48) configured for removably and reversibly closing the open top of the firing chamber (14).
