Abstract (en)

[origin: WO2022161860A1] The invention relates to a connection assembly (100) for connecting an electrical conductor (300), comprising a current bar (110), a clamping spring (111) which has a holding leg (112) and a clamping leg (113), the conductor (300) to be connected being clamped against the current bar (110) by means of the clamping leg (113) in a clamped position of the clamping spring (111), and an actuating element (118) which can be guided in an actuation direction (B) and by means of which the clamping spring (111) can be transferred from the clamped position into the open position, the actuating element (118) being braced with the clamping spring (111) in the open position and holding the clamping spring (111) in the open position.
