Abstract (en)
The shower drain according to the invention comprises a drain pan elongated in a longitudinal direction and having an outlet (2), a bottom surface and vertical walls (4, 6) along a perimeter of the bottom surface, wherein upper edges of the vertical walls define an inflow opening of the drain pan. The shower drain further comprises a cover plate (8, 9), which covers the inflow opening of the drain pan, wherein in the cover plate at least one orifice is provided, through which water can flow via the inflow opening into the drain pan. The cover plate extends over each of the upper edges of the vertical walls in order to cover the upper edges completely. The cover plate is divided, in the longitudinal direction of the drain pan, into at least two cover plate parts (8, 9).
