Abstract (en)
A vent for a window frame is provided. The vent comprises: a vent frame defining a slot with a longitudinal axis. The vent frame comprises a frame body and a cover attachment. The vent further comprises: a cover member comprising a frame attachment pivotally attached to the cover attachment. The cover member is moveable between: a closed position in which the cover member completely envelops the frame body to block airflow through the vent; and an open position in which the cover member is spaced from the vent frame to allow airflow through the vent.
