Abstract (en)
An electronic device including a first contact member (16), a second contact member (25) which is arranged opposing the first contact member (16), a resilient conductive member (30) which electrically connects the first contact member (16) with the second contact member (25), and a resilient guide holding member (32) having a guide portion (34) which guides the resilient conductive member (30) in opposing directions of the first contact member (16) and the second contact member (25), and a resilient holding portion (35) which holds the guide portion (34) such that the guide portion (34) is resiliently movable in the opposing directions of the first contact member (16) and the second contact member (25).
