Abstract (en)

The present application relates to an electromagnetic coil, a heating assembly, and an electronic atomizing device. The electromagnetic heating coil is at least one wire bundle helically wound about an axis. In an extending direction of the axis, the electromagnetic heating coil comprises at least one turn. Each wire bundle comprises at least two conducting wires. Each turn has a first size in the extending direction of the axis and a second size in a first direction perpendicular to the extending direction of the axis. The first size is greater than the second size.
