Abstract (en)

[origin: WO2022167856A1] A liquid container having an aerosol forming liquid for an electronic cigarette, the liquid container including a primary liquid component including nicotine, and a secondary liquid component, wherein the primary and secondary liquid components are immiscible to form an interfacial tension surface between a first volume in the liquid container having the primary liquid component and a second volume in the liquid container having the secondary liquid component to fully separate the primary and secondary liquid components from each other.
