Abstract (en)
[origin: WO2022167475A1] Non-combustible aerosol provision device 100 for generating an aerosol from an aerosol-generating material comprised in a consumable for being received by the device. The device comprises a chamber 102 for receiving the consumable, wherein the device is configured to generate the aerosol from the aerosol-generating material when the consumable is received in the chamber 102. The device 100 further comprises a consumable holder 500 for holding the consumable in the chamber 102, wherein the consumable holder 500 comprises at least two selectively engageable gripping members which are spaced from one another in an axial direction of the chamber 102 to grip different respective points on the consumable, such that the consumable holder is capable of holding, by use of the selectively engageable gripping members, one at a time, each of a plurality of differently-dimensioned consumables at a desired position in the chamber 102.
