Abstract (en)
[origin: WO2022167439A1] A liner (100) for use with an aerosol provision device is disclosed. The aerosol provision device comprises a chamber (22) and an aerosol generator for generating aerosol from aerosol-generating material when a consumable (64) comprising the aerosol-generating material is located in the chamber. The liner is for selective insertion into the chamber, and the liner is formable into a first configuration in which the liner is wound with a first diameter, and formable into a second configuration in which the liner is wound with a second diameter greater than the first diameter. The liner is movable from the first configuration to the second configuration when inserted into the chamber to at least partially line the chamber.
