Abstract (en)
[origin: CA3206954A1] The invention relates to a method for producing a mold element (100) for producing microarrays, having the steps of: (i) providing a flat base element (10) which has a first surface (16) and a second surface (24) lying opposite the first surface (16), (ii) providing a flat auxiliary element (11) on the second surface (24), (iii) piercing the base element (10) starting from the first surface (40) in order to form mold openings (14), and (iv) reversibly or non-reversibly piercing the auxiliary element (11) upon piercing the base element (10). The invention additionally relates to a mold element (100) for producing microarrays, comprising a flat base element (10) which has a first surface (16) and a second surface (24) lying opposite the first surface (16), a flat auxiliary element (11) which is arranged on the second surface (16), and multiple mold openings (14) which extend from the first surface (16) of the base element (10) to the second surface the base element (10).
