Abstract (en)

[origin: WO2022167434A1] The present invention relates to a composite pane (10) comprising an electrically heatable camera window (2) and, inside the camera window (2), a first electrically conductive transparent coating (6.1) for heating the camera window (2), the first electrically conductive transparent coating (6.1) being located on the first surface (III) of the inner pane (1) inside the camera window (2) and having two busbars (7.1, 7.2) which are provided for connection to a voltage source (9) and are located on two opposite sides of the camera window (2) in such a way that, when an electrical voltage is applied to the busbars (7.1, 7.2), a current flows through the first, electrically conductive, transparent coating (6.1).
