Abstract (en)
[origin: WO2022167209A1] The invention relates to a wall mount (1) comprising: an anchor element (2) that has a fastening portion (3) for fastening the anchor element (2) to a building and that has an anchor-element-side bearing portion (4) adjoining the fastening portion (3) and extending along a central axis (M); at least one intermediate element (5) that has a first bearing portion (6) and a second bearing portion (7); and a fastening element (8) that has a fastening-element-side bearing portion (9) and that has a fastening portion (10) for fastening a sanitary element, wherein: the first bearing portion (6) of the intermediate element (5) is slidably and securably connected to the anchor-element-side bearing portion (4); the fastening-element-side bearing portion (9) of the fastening element (8) is slidably and securably connected to the second bearing portion (7); and said bearing portions (4, 6, 7, 9) are each designed such that the corresponding bearing portions (4, 6, 7, 9) each telescopically engage with one another.
