Abstract (en)  
[origin: WO2022167073A1] The present invention relates to a method for operating an automation field device (3, 4), having an input interface (31), a memory (32) which stores at least one set of parameters for operating the field device (3, 4), and having a first communication interface (33), wherein, if at least one parameter in the set of parameters is changed by a first entity (11), the following steps are carried out in the following order:  
- transmitting at least the changed parameter(s) and/or data calculated therefrom to a superordinate unit (5), - informing a second entity (12) of the change.
