Abstract (en)

[origin: WO2022167300A1] The invention relates to a method for the infrastructure-supported assistance of a motor vehicle, comprising the following steps: receiving surroundings signals which are representative of a surroundings of the motor vehicle, analyzing the surroundings in order to determine a traffic situation, in which the motor vehicle is located, determining a suggestion for a traffic-directing traffic control measure for the infrastructure-supported assistance of the motor vehicle for an operator based on the determined traffic situation, outputting suggestion signals which are representative of the determined suggestion. The invention relates to a device, to a computer program and to a machine-readable storage medium.
