Abstract (en)
[origin: WO2022167733A1] The present invention relates to an analysis plate (10) configured to allow a characterization of microorganisms (20) by mass spectrometry, wherein said analysis plate comprises at least one analysis zone (11) configured for a biological sample containing a population of at least one microorganism, characterized in that all or part of said analysis zone is made of a porous material, said analysis zone comprising at least one antimicrobial agent.
