Abstract (en)
Disclosed is a dynamic chair comprising: a frame joined at the top to a seat body and at the bottom to a base (3) designed with a central projecting protuberance (4) that acts as an unstable support means of the seat; and an electrical circuit formed by an electrical cable (6) connected at one end to a first metal piece (7) joined to the seat body (1), and at the other end to a second metal piece (8) joined to the central protuberance (4), and which is in contact with the ground, the cable being designed to receive, conduct and divert to earth static electricity that a user seated on the seat may have accumulated.
