Abstract (en)

The invention describes a luminous system (1) for horizontal roadway marking. The system (1) comprises at least one flexible luminous emitter (3) which is housed inside a channel (4) made on the roadway. The invention further comprises a transparent or translucent filler material (5) comprising at least one transparent or translucent aggregate mixed with a binder, wherein the filler material (5) is made of at least an 85% of aggregate with respect to the total mass of filler material. The filler material (5) is arranged on the at least one luminous emitter (3) covering the channel (4) essentially up to the surface of the roadway, such that the light emitted by the luminous emitter (3) is visible through the transparent filler material (5) to vehicles and pedestrians moving on the roadway
