Abstract (en)

A planar panelling arrangement comprising: a plurality of elongate supports aligned in parallel with each other, each support being a single integral component comprising, on one face of the support, a central channel aligned parallel to the longitudinal axis of the support, the central channel having a longitudinal aperture which is narrower than the width of the inner walls of the channel; a plurality of connectors, each connector comprising a first portion and a second portion; a plurality of panels configured to be arranged to collectively form a planar surface, the sides of each panel comprising a side groove; wherein the first portion of the connector is configured to clip securely into the channel of the support, the second portion of the connector comprises at least one lateral flange configured to be inserted into the side groove of a panel.
