Abstract (en)

[origin: WO2022171331A1] The present invention relates to a connection device (10) for releasably connecting a first connection portion (12) to a second connection portion (22), the connection device comprising: a first connection portion (12), to which a plurality of first magnet bodies (14) are fastened; a second connection portion (22), to which a plurality of second magnet bodies (20) are fastened; wherein, in order to connect the first connection portion (12) to the second connection portion (22), each one of the first magnet bodies (14) can be positioned between two adjacent second magnet bodies (20), or vice versa, the first magnet bodies (14) comprise in each case a recess (26) and the second magnet bodies (20) comprise in each case a projection (28), or vice versa, and in the connected state the projections (28) engage in the recesses (26). The invention also relates to a textile web (16, 24) comprising at least one such connection device.
