Abstract (en)

[origin: WO2022171519A1] The invention relates to a machine tool (11) in the form of a hand-held power tool (11) or a semi-stationary machine tool, the machine tool having a tool holder (19) for holding a work tool (AW), a drive motor (16) for driving the tool holder (19) and at least one electrical function unit (FE1, FE2), the machine tool having a control device (20) for actuating the at least one electrical function unit (FE1, FE2) using at least one actuation function (AF1-AF4), the at least one electrical function unit (FE1, FE2) being designed to perform an output function depending on the actuation by the at least one actuation function (AF1-AF4), and the machine tool having at least one operation element (33), which can be moved by an operator of the machine tool between a first operation element position (B331, B332) and at least one second operation element position (B331, B332) to actuate the control device (20). According to the invention, the machine tool has a parameterizing interface (28), via which at least one allocation parameter (ZP1, ZP2) can be parameterized for allocation of the at least one operation element (33) and the first operation element position (B331, B332) and/or the at least one second operation element position (B331, B332) to the at least one actuation function (AF1-AF4), such that, when the at least one operation element (33) is moved into the first or at least one second operation element position (B331, B332), the control device (20) actuates the at least one electrical function unit (FE1, FE2) using the at least one actuation function (AF1-AF4).
