Abstract (en)
[origin: WO2022171963A1] The invention relates to glazing comprising at least two glazed walls, which form a cavity between them, and at least one stack of resonators (3) positioned in the cavity, wherein the at least one stack of resonators (3) comprises at least two resonators (3) of different length, said resonators of the at least one stack having a longitudinal axis and being stacked along a stacking axis perpendicular to their longitudinal axis.
