Abstract (en)
[origin: WO2022171691A1] This invention is related to an automotive luminous device (1) for an automotive vehicle. This lighting device (1) comprises a circuit support (2) comprising a plurality of light groups of at least one light source (3), a control unit configured to control the operation of each light group, a main optical element (5) arranged to provide a light path (6) for each light group and a wavelength conversion layer (7) arranged to receive the light projected by the light paths (6), wherein the wavelength conversion layer (7) is configured to project light in a different wavelength than the light received from the light paths (6).
