Abstract (en)

[origin: WO2022175218A1] The present invention relates to a process for producing dairy products with a high active immunoglobulin content and a high weight ratio active sIgA / active IgG, involving the steps of collecting mature milk from ruminants with a parity of at least 3, and optionally subjecting said milk to a pasteurization treatment; and to uses of this process. The invention also relates to specific milk products having a high active sIgA / active IgG weight ratio.
