Abstract (en)

[origin: WO2022175282A1] The invention relates to a cap for closing a container for administering a medication, comprising a pot-shaped body, which has a cavity with at least one or more openings and a base plane for delimiting the cavity at least in some regions, and at least one septum, wherein the body has a dome with an end-face opening which is closed by the septum, and the dome protrudes from the base plane on the base plane face opposite the cavity. The septum is inserted into a receiving area of the dome under pretension. The invention also relates to a method for producing the cap.
