Abstract (en)  
An aerating pouring device includes a wine stopper unit (3) fittingly and removably insertable into a wine bottle (900), a spout unit (4) mounted upon and coaxially rotatable relative to the wine stopper unit (3), and an interlock unit (5) connected between the wine stopper unit (3) and the spout unit (4). The spout unit (4) is operable to rotate relative to the wine stopper unit (3) through the interengagement of the interlock unit (5) between a wine pouring position, where an upper wine outlet passage (450) and an upper air inlet passage (460) defined in the spout unit (4) are respectively communicated with a lower wine outlet passage (312) and a lower air inlet passage (313) defined in the stopper unit (3), and a sealing position, where the spout unit (4) closes the lower wine outlet passage (312) and the lower air inlet passage (313).
