Abstract (en)

A fastening system for attaching a board-shaped structural element (5) to a profile rail (3) by means of nailed joint comprising a first flange portion (8) for interaction with the structural element (5), a second flange portion (9), and a web portion (10), wherein the first flange portion exhibits a first, external surface (25) for interaction with the structural element, and a second, internal surface (26) facing toward the second flange portion. The fastening system also comprises a fastening means (21), which comprises a fastener (22), and is adapted to be mounted in the profile rail, wherein said fastener abuts against the internal surface and forms an attachment point for a nail (27) which passes through the structural element, the first flange portion and holds in the fastener to form the nailed joint.
