Abstract (en)

The present invention relates to a combustion unit (1) comprising a cyclonic combustion chamber (10), with an internal shell (11) having a gravity discharge outlet (15) for the ashes generated during combustion, and a vibration mechanism (6) of the chamber (10) that cyclically impresses to the ashes accumulated on the bottom of the internal shell (11) an upward thrust with an horizontal component in the direction of the rear end (13) of the internal shell (11) in which the aforementioned discharge outlet (15) for the ashes is located.
