Abstract (en)
Heat exchanger (1) for fluids, comprising at least two sets of pipes (10), each set of pipes (10) including an internal pipe (11), an intermediate pipe (12) and an external pipe (13), concentric to each other and forming between them spaces for the longitudinal circulation of fluids, wherein the intermediate pipes (12) are connected in series by means of curved pipes (20), wherein each set of pipes (10) comprises an inner connecting conduit (31) that fluidically connects one end of the internal pipe (11) with an element external to the set of pipes (10) itself, an intermediate connecting conduit (32) that fluidically connects the other end of the internal pipe (11) with the adjacent end of the corresponding external pipe (13), and an outer connecting conduit (33) that fluidically connects the other end of the external pipe (13) with another element external to the set of pipes (10) itself.
