Abstract (en)  
[origin: WO2022180078A1] The invention relates to a sleeve-shaped outer part (12) formed from a blank cut (13), the blank cut (13) being wound to form a jacket and end portions (14, 15) being connected to each other in an overlapping region (16). The outer part (12) has a first and a second end face (19, 20) which are spaced apart from each other. An additional support device (40) is arranged or designed in the region of the first end face (19) of the outer part (12). The additional support device (40) defines a clear inner dimension (44) which is smaller than an inner dimension (45) of the outer part (12) in its undeformed design in the region of the first end face (19).
