Abstract (en)
[origin: CN117322709A] A wristband having sections made of a hard material. The invention relates to a wristband (1) comprising: a first row (8) with at least one central section (2); a second row (9) and a third row (10) respectively arranged on both sides of the first row (8) and each comprising at least one side section (3); a connecting rod (4) positioned in the three aligned holes of the first, second and third rows, the wrist strap (1) being characterized in that the connecting rod (4) comprises a shoulder (5), and wherein each hole (2a) of the central section (2) opens at one of its ends into a cutout (6) formed in the central section (2), the cutout (6) being delimited by a first wall (6b) and a second wall (6c), the cutout (6) being formed in the central section (2), the cutout (6) being formed in the central section (2) when the central section (2) is pivoted about the connecting rod (4). The first wall (6b) and the second wall (6c) serve as a first stopper and a second stopper for the shoulder (5) in order to limit the amplitude of rotation of the central section (2) about the connecting rod (4).
