Abstract (en)
[origin: WO2024002831A1] There is described an opening device (3, 3') comprising a collar (15) and a cutter (17) at least partially arranged within a flow channel (16) delimited by the collar (15). The opening device (3, 3') further comprises a retaining device configured to block movement of the cutter (17) out of the flow channel (16) and through a pouring outlet (19) of the collar (15). The opening device (3, 3') also comprises a flange (30) protruding from the cutter (17).
