Abstract (en)

[origin: TW202234010A] A heat exchanger (100) of the present invention includes a first header (11) and a second header (12), and a plurality of heat transfer members (1) having one end in a second direction (Z) connected to a first header and the other end in the second direction connected to a second header. Each of the plurality of heat transfer members is configured so as to perform heat exchange between a first heat exchange medium flowing in an internal space in the second direction and a second heat exchange medium flowing in a third direction (Y) in an outer space of each of the plurality of heat transfer members. A heat exchanger further includes a plurality of heat transfer promoting members (2) extending along the third direction (Y) in the outer space arranged in the central portion between two heat transfer members adjacent to each other in a first direction (X) among the plurality of heat transfer members and.
