Abstract (en)

[origin: WO2022184582A1] The invention relates to a medicinal product having an elastically deformable functional part with an openable slot arrangement, wherein the slot arrangement widens or opens in the event of elastic deformation of the elastically deformable functional part, and closes again when the elastic deformation ceases, wherein slot wall surfaces of the slot arrangement have a separation means that has or consists of a solid. The invention also relates to an elastically deformable functional part for a medicinal product, and to a method for sterilizing and/or producing sterilization stability in a medicinal product or in an elastically deformable functional part.
