Abstract (en)

[origin: WO2022187480A1] In one embodiment, a method includes presenting a text message comprising n-grams via a user interface of a client system based on a user utterance received at the client system, receiving a first user request at the client system to edit the text message, presenting the text message visually divided into blocks via the user interface, wherein each block comprises one or more of the n-grams of the text message and the n-grams in each block are contiguous with respect to each other and grouped within the block based on an analysis of the text message by a natural-language understanding (NLU) module, receiving a second user request at the client system to edit one or more of the blocks, and presenting an edited text message generated based on the second user request via the user interface.
