Abstract (en)  
An electronic vaporization device includes a vaporizer 100 ; a battery 200; and a controller (300). A first electrode 400 and a second electrode 500 that are separable are arranged between any two of the vaporizer, the battery, and the controller. The first and second electrodes may be arranged on a positioning element (610) and a fastener (620) which can be buckled to connect the electrodes and thereby implement normal working of the device. Alternatively the first and second electrodes are arranged in a groove on the shell of the device, and an insert 700 including a conductive material is configured to connect the first and second electrodes when the insert 700 is embedded in the groove.
