Abstract (en)  
Examples of the disclosure are configured to reduce the effects of reflections from the surfaces of head mounted items such as mediated reality headsets or sunglasses. Examples of the disclosure are configured to detect that a user is using a device with a display and that the user is wearing a head mounted item comprising one or more reflective surfaces. The examples of the disclosure then cause a light pattern to be projected onto the one or more reflective surfaces wherein the pattern is projected to mask a reflection of the display of the device on the one or more reflective surfaces.
