Abstract (en)

[origin: WO2022189612A1] The invention relates to improvements in the technical field of electromedical plug connections. For this purpose, inter alia a connector (1) for an electromedical electrode (2) is devised, having at least one contact terminal (3) that is coated with a non-conducting protective layer (4) that can be locally opened at least to some extent (cf. fig. 3).
