Abstract (en)
[origin: WO2022189584A1] The present invention relates to security-protected at article comprising the first raster (10) and a second raster (20) or to an assembly of a security-protected article comprising a first raster and of another object comprising a second raster, the first raster comprising a number n of sub-rasters, the sub-rasters and the second raster each consisting of first patterns of the same dimension, separated by second patterns of the same dimension, the second patterns being different in appearance from the first patterns, the n sub-rasters all being phase-shifted from one another by a distance less than x_1+x_2 and a multiple of the smallest phase-shift between the n sub-rasters, n being greater than or equal to 3, when the first and the second raster are superposed, the first raster being at least partially visible through the second patterns of the second raster and/or the second raster is at least partially visible through the second patterns of the first raster.
