Abstract (en)
[origin: WO2022189092A1] The invention relates to a device (10) for the improved visualization of a first indication symbol (24) and a second indication symbol (26) in a motor vehicle (30), to a corresponding system (18), method and computer program. The invention relates to a contact-analogous head-up display, in particular an Augmented Reality (AR) Head-up Display (20) which places items of information (24, 26) in direct contact to the environment. Contrary to conventional head-up displays, the items of information (24, 26) appear as a part of the environment. The subject matter of the invention is the dynamic improvement of the visibility of concealed AR elements (24) in situations, in which a plurality of elements (24, 26) are displayed in parallel.
