Abstract (en)

[origin: WO2022189721A1] The invention relates to an opening device (1) for a container (100) that is able to contain a liquid, the device comprising a lid (10) configured to be crimped onto a border of a body (2) of the container so as to close the latter, the lid comprising a straw housing (12) and an orifice (14), an external straw (30) made of elastomer fixed to the lid (10) so as to communicate with the orifice (14) and being able to be deformed elastically from a straight position, a slide coupled to the lid (10) so as to be movable between an opening position and a closing position for uncovering or recovering the straw housing (12) and the orifice (14), the slide being able to fold the external straw (30) into the straw housing (12) by elastic deformation from its straight position while passing from the opening position to the closing position, and to keep the external straw (30) folded in the straw housing (12).
