Abstract (en)
[origin: WO2022189708A1] The present invention relates to a mounting support (1) for mounting vertically oriented elements (2). Such a mounting support comprises an arm (3) oriented substantially vertically in use of the mounting support, which has special coupling means (7) by which the arm can be anchored to a coupling device (5) which is, as such, prior art. This coupling device is arranged to or on the base where the mounting of the element takes place. The said arm also has a laterally projecting support brace (4) which can be displaced in its projecting direction and which, by being connected to the element, gives it the desired stability both horizontally and vertically.
