Abstract (en)

[origin: WO2022195271A1] A component for an article for use in or as a non-combustible aerosol provision system includes a body of material extending in a longitudinal direction, where the body of material comprises sheet material having fibres having a length in the range 2 mm to 6 mm. The body of material can have a density in the range between about 0.1 and 0.25 mg/mnT-. An article for use in or as a non-combustible aerosol provision system is also provided including an aerosol generating material and a downstream portion downstream of the aerosol generating material, the downstream portion including the component. A non-combustible aerosol provision system and a method for forming a component for an article for use in a non-combustible aerosol provision system are also described.
