Abstract (en)

[origin: WO2022195274A1] A component for an article for use in or as a combustible aerosol provision system can include a body of material extending in a longitudinal direction, where the body of material includes crimped sheet material formed having a crimp pattern comprising a series of substantially parallel ridges and grooves. The average spacing between adjacent ridges can be greater than about 0.3 mm and the average density of the body of material can be between about 0.1 and about 0.25 mg/mm<sup>3</sup>. Additionally or alternatively, the crimp amplitude can be less than about 0.7 mm or between about 0.7mm and about 1.2mm. There is also provided an article for use in or as a combustible aerosol provision system, the article including an aerosol generating material and a downstream portion downstream of the aerosol generating material, the downstream portion having the component. A combustible aerosol provision system and a method for forming a component for an article for use in a combustible aerosol provision system are also provided.
