Abstract (en)
[origin: CA3203941A1] The invention relates to a set for protecting a water pipe (1) against breakage and/or damage in the event of overturning, which water pipe (1) has a mouthpiece (3) and a chillum (10). In order to be able to obtain optimal protection of water pipes (1) of the most diverse shapes despite a simple attachment while simultaneously achieving a small space requirement, it is provided according to the invention that a set comprises a mouthpiece element (4) and a chillum element (9) which are, at least in some regions, formed from a more elastic material than the water pipe (1), in particular a more elastic material than glass, and which each comprise an opening and can be releasably attached to the water pipe (1) in that the mouthpiece (3) is introduced into the opening (5a) of the mouthpiece element (4) and the chillum (10) is introduced into the opening (5b) of the chillum element (9). The invention furthermore relates to a water pipe (1) having a mouthpiece (3) and a chillum (10) as well as a set for protecting the water pipe (1) against breakage and/or damage in the event of overturning. Additionally, the invention relates to a use of a set for protecting a water pipe (1) against breakage and/or damage in the event of overturning.
