Abstract (en)
[origin: WO2022194934A1] The invention relates to a clothes hanger (1) comprising two limbs (20, 20'), each of which comprises a limb arm (21), said limb arms being elastically connected together via a housing cassette (3). The housing cassette (3) forms the apex of an angle (a), and the limb arms (21) form the two legs of the angle (a), wherein the size (W) of the angle (a) can be reduced by pivoting the limbs (20, 20') about a pivot axis (A), thereby building up a restoring force by means of the elastic connection, wherein the limbs (20, 20') are secured against an accidental pivoting of the limb arms (21) via at least one locking mechanism, and corresponding blocking elements (14, 24) of the locking mechanism or the locking mechanisms move away from each other or towards each other in the event of a pivoting movement of the limbs (20, 20').
