Abstract (en)

[origin: WO2022194719A1] Device (1) for monitoring the status of a user in an environment, comprising: - a mobile module (10), which is intended to be worn by the user and comprises an activity sensor and a processing unit for producing a status signal (S_s) from an activity signal generated by the activity sensor; - beacons (20), which are distributed in the environment and are designed to send a transmission signal (S_e) to the mobile module (10) via a short-range wireless connection; the device being characterised in that: - the processing unit (15) is designed to produce a position signal (S_p) on the basis of at least one distance between the mobile module and a beacon; - the transmission unit (16) is designed to transmit the status signal (S_s) and the position signal (S_p) to the central unit (30).
