Abstract (en)  
[origin: WO2022194806A1] Thermal conditioning system (100) including a refrigerant circuit (2) successively comprising: a compression device (3); a first two-fluid heat exchanger (4) arranged on a first loop (5) of a heat transfer liquid circuit (1); a second two-fluid heat exchanger (6) arranged on a second heat transfer liquid loop (7); a first expansion device (8); a third two-fluid heat exchanger (9) arranged on a third heat transfer liquid loop (10), wherein the first loop (5) has a first heat exchanger (11) configured to exchange heat with a first air flow (F1), wherein the second loop (7) has a second heat exchanger (12) configured to exchange heat with a second air flow (F2), wherein the third loop (10) has a third heat exchanger (13) configured to exchange heat with the first air flow (F1), and wherein the first loop (5) comprises a fourth heat exchanger (14) configured to exchange heat with the second air flow (F2).
